

Data Science Maturity Assessment

“

There are two types of organizations:
those **executing** on a data strategy and
those that will be **acquired** by the former.

”

COLLECT MODEL ACT

Over the last decade, more value creation has occurred through the strategic collection and usage of data than ever before.

This paradigm shift has resulted in countless winners – and losers – as efficiency and innovation evolve.

Which side of the market do you want to be on?

Our Approach

Data-Driven Discovery

- We begin by understanding your goals and surveying your business activities, personnel, data assets, and data science capabilities.
- Unlike most professionals, we leverage our proprietary discovery platform and industry data to scan your source control systems and databases for relevant assets. The resulting inventory is faster to produce and requires less effort from you team.

Maturity Scorecard

- Based on what we find in discovery, we summarize the strengths and weaknesses of your organization's data science capabilities through a weighted score card.
- Organizations range from those that use their data science assets and capabilities as a competitive advantage (Level 4) to those that have not yet begun (Level 1).

Roadmap and Program Design

- It's nice to know how far you've come on your journey, but for most organizations, the road ahead is more important than the rear view mirror.
- Our assessment report provides more than just an inventory and scorecard. We also detail recommended next steps like hiring, procurement, compliance, and marketing.

About Licensio

Software and data run today's organizations. Shouldn't we be paying more attention?

We started Licensio to address compliance and risk management for builders, buyers, and sellers of software and data.

Our goal is to identify, quantify, and manage risk and value. By leveraging our experience in technology, insurance, and compliance, we're able to provide technology-enabled techniques to efficiently address the risks and opportunities that businesses face.

Lending a Helping Hand

Building, maturing, and maintaining a data science capability is key to success in many industries, but there are simply too few experienced professionals to meet today's demand. By partnering with us, you can achieve these goals without fighting labor market trends.
